Summary

I am a final-year Computer Science & Engineering student specializing in frontend development with a strong foundation across the full stack. I have developed a variety of web and mobile applications through my academic coursework and personal projects. I have gained practical experience in frontend interfaces, API routing, and database management. I enjoy creating clean, maintainable software that is intuitive and useful.

Experience

Software Engineering Intern @ Star Matrix Technology

June 2026 – September 2026

Mandalay, Myanmar

- Built an internal Service Operations Management System (SOMS) using Next.js and PostgreSQL to centralize ELV support tickets, user service requests, and maintenance schedules.
- Gathered feedback during User Acceptance Testing (UAT) to align digital workflows with the team's actual on-ground processes.
- Designed and developed a multi-page, fully responsive corporate website, creating reusable UI components to improve page-load speeds.
- Drafted project handover reports, compiled meeting decks, drew network/ELV schemas, and shadowed engineers during troubleshooting and user onboarding.

Education

B.E (Hons.) in Computer Science & Engineering

Dec 2019 - Present

Myanmar Institute of Information Technology (MIIT)

Mandalay, Myanmar

- **Relevant Coursework:** Data Structures & Algorithms, Software Engineering, Software Architecture, Operating Systems, Computer Networks, Database Systems, Data Analytics, Discrete Mathematics, Linear Algebra, Statistics & Probability.

Selected Projects

Service Operations Management System (Capstone)

Tech Stack: React, Next.js, TanStack Query, shadcn/ui, PostgreSQL

- Built an internal service management system to centralize operational workflows, support tickets, and maintenance event schedules.
- Created role-based permissions and workflows to handle ticket creation, assignments, and history tracking.
- Developed backend API endpoints with Next.js Route Handlers and Prisma to manage service requests, properties, maintenance schedules, events, and facility requests.

- Built the dashboard interface with React, Next.js, TanStack Query, and shadcn/ui to give admins a clear view of operational data.

Star Matrix Technology Company Website

[Preview](#)

Tech Stack: Next.js, TailwindCSS, React

- Awarded 1st place in an internal intern challenge, with my design selected for development as the company's official corporate website.
- Designed the public-facing corporate website to showcase technology services, client portfolios, and core business offerings.
- Created a multi-page, fully responsive website with reusable UI components to keep the design clean and improve page-load speeds.

MIT Projects Management System (PIMS)

Tech Stack: React, React Router, TanStack Query, shadcn/ui, Laravel, PostgreSQL, AWS S3

- Created a web application to organize and track academic projects, teams, and project-related information.
- Built accessible, reusable UI components using shadcn/ui and managed client-side routing via React Router.
- Used TanStack Query for server-state management to handle data fetching, caching, and background synchronization.
- Added AWS S3 storage to handle file uploads and host project-related documents and media assets.

FoundIt! Lost & Found Mobile App

Tech Stack: Kotlin, Android, Firebase (Firestore, Authentication), REST APIs

- Built an Android app that helps students and staff report, search, and recover lost items using real-time Firestore listings and Firebase Authentication.
- Connected the ImgBB API for image uploads and designed intuitive search filters to streamline the university's lost-and-found process.
- Handled the full development cycle, from Figma UI/UX design and Kotlin development to final app testing.

Generation of Exam Timetables Using Constraint Satisfaction Problem Solution

Tech Stack: React.js, TailwindCSS, Laravel, MySQL, Figma

- Built a scheduling system using Constraint Satisfaction Problem (CSP) techniques to automatically generate conflict-free exam timetables.
- Set up rules to handle room allocations, time slot conflicts, and course overlaps.
- Created the UI/UX design in Figma and built the frontend using React.js and TailwindCSS for a smooth user experience.

CV Builder

[Preview](#)

Tech Stack: React.js, React Router, TailwindCSS, Zustand

- Developed a web-based CV builder with real-time editing and live preview, allowing users to create and customize resumes dynamically.

- Implemented Zustand for centralized state management to synchronize form inputs, CV data, and rendered preview content.
- Designed a clean, one-click PDF export using the browser's native print layout to ensure professional formatting without needing external downloads.

The Simpsons Memory Card Game

[Preview](#)

Tech Stack: React.js, motion/react, TailwindCSS, JavaScript

- Developed an interactive memory card game with game-state management, card matching, scoring, and progression logic.
- Created a lively, arcade-like feeling by mixing in custom theme music, sound effects, and instant visual feedback for correct matches.
- Kept players engaged by tracking current streaks and high scores natively within the application state.

Skills

Languages & Frameworks: React, Next.js, React Native, Kotlin (Android), TypeScript, JavaScript, HTML/CSS

Databases & Cloud: PostgreSQL, MySQL, Prisma, Firebase/Firestore, AWS S3, REST APIs

Libraries & Tools: Git, GitHub, Figma, Zustand, TanStack Query, Tailwind CSS, shadcn/ui

Certificates

CS50P: Introduction to Programming with Python — Harvard University

[View Credential](#)

CS50X: Introduction to Computer Science — Harvard University

[View Credential](#)

Cybersecurity Essentials (LFC108) — The Linux Foundation

[View Credential](#)

Complete Intro to React — Frontend Masters

[View Credential](#)

Languages

Burmese: Native proficiency.

English: Professional working proficiency.

Activities

Participant @ Cursor AI Hackathon Myanmar (2026)

[View Credential](#)

- Helped build a prototype for an AI Recycling Assistant that identifies objects from images and shows secondary market data.
- Worked on the frontend layout, fixed bugs locally, and updated the deployment under a tight deadline.

Participant @ The AI Ready ASEAN Youth Challenge (2025)

[View Credential](#)

- Collaborated with a team to write a project proposal and create a video presentation for a scam awareness and detection chatbot.
